AR-Comp

When it comes to reloading AR-style rifles as well as other rifles, there's a new powder choice on the market—AR-Comp™ from Alliant Powder. Alliant's new AR-Comp is the ideal powder for fast action, high volume AR shooters as well as those who enjoy shooting traditional rifles. Developed specifically for AR-style rifles and ideally suited for heavy 223 and 308 match bullets, AR-Comp delivers high performance ignition each and every time.

Features & Benefits

- Developed specifically for the AR-15 style rifles
- Ideal for heavy 223 and 308 match bullets
- Consistent pressures and velocities across temperature extremes
- Suitable for all semi-auto rifles
- Made in Sweden for Alliant Powder
- Lot to Lot consistency

2012 NEW PRODUCTS

PROPELLANT

Black MZ

After years of research and development into black powder formulas, Alliant Powder introduces Black MZ—a new black powder replacement. Designed for shooters of all disciplines, Black MZ is an ideal choice for hunters as well as Cowboy Action shooters, reenactment shooters and the recent rise in 45/70, 45/90 and 45/100 shooters. Since reliable ignition and stubborn fouling are common headaches among muzzleloaders, Alliant Powder developed Black MZ to burn cleaner and be virtually non-corrosive. Laboratory tests in a humid environment (68 degrees Fahrenheit and 90% relative humidity) proved Black MZ's reliability with the propellant still firing after 23 days.

Features & Benefits

- Dependable ignition in all black powder firearms (including flintlocks)
- Virtually moisture resistant and non-corrosive
- Results duplicate black powder performance
- Lower barrel pressure and increased velocities
- Lot-to-Lot consistency
- Made in the USA
